

# Physical Sciences Formula Sheet

Free student resource. Use it, print it, and share StudyHub with a friend.

## Core method

- Write the formula first.
- Convert units before substituting.
- Substitute values with units.
- Calculate and round correctly.
- Check if the answer is realistic.

## Formula practice table

| Concept      | Formula                    | Unit check        |
|--------------|----------------------------|-------------------|
| Velocity     | $v = \Delta x / \Delta t$  | $\text{m.s}^{-1}$ |
| Acceleration | $a = \Delta v / \Delta t$  | $\text{m.s}^{-2}$ |
| Force        | $F = ma$                   | N                 |
| Work         | $W = F\Delta x \cos\theta$ | J                 |
| Power        | $P = W/t$                  | W                 |
| Charge       | $Q = It$                   | C                 |
